Fun online software to help kids with autism

These materials are completely FREE for you to use, reproduce, and distribute as you wish. They are ideal for use on autism-related web sites or for inclusion in information packs for parents and carers. Feel free to give away copies to any friends who might be able to make use of them.

Try making this fabulous MouseTrial underpants zoetrope!

Print out this page on heavyweight paper or card. Then carefully cut out the disk including all the narrow slots around the perimeter. Make a hole in the centre and push a pencil through to act as an axle. Stand in front of a mirror and look through the slots at the reflection of the disk as you rotate it. It works best with strong lighting (an actor's illuminated make up mirror would be ideal!) and you should keep your eyes close to the disk.

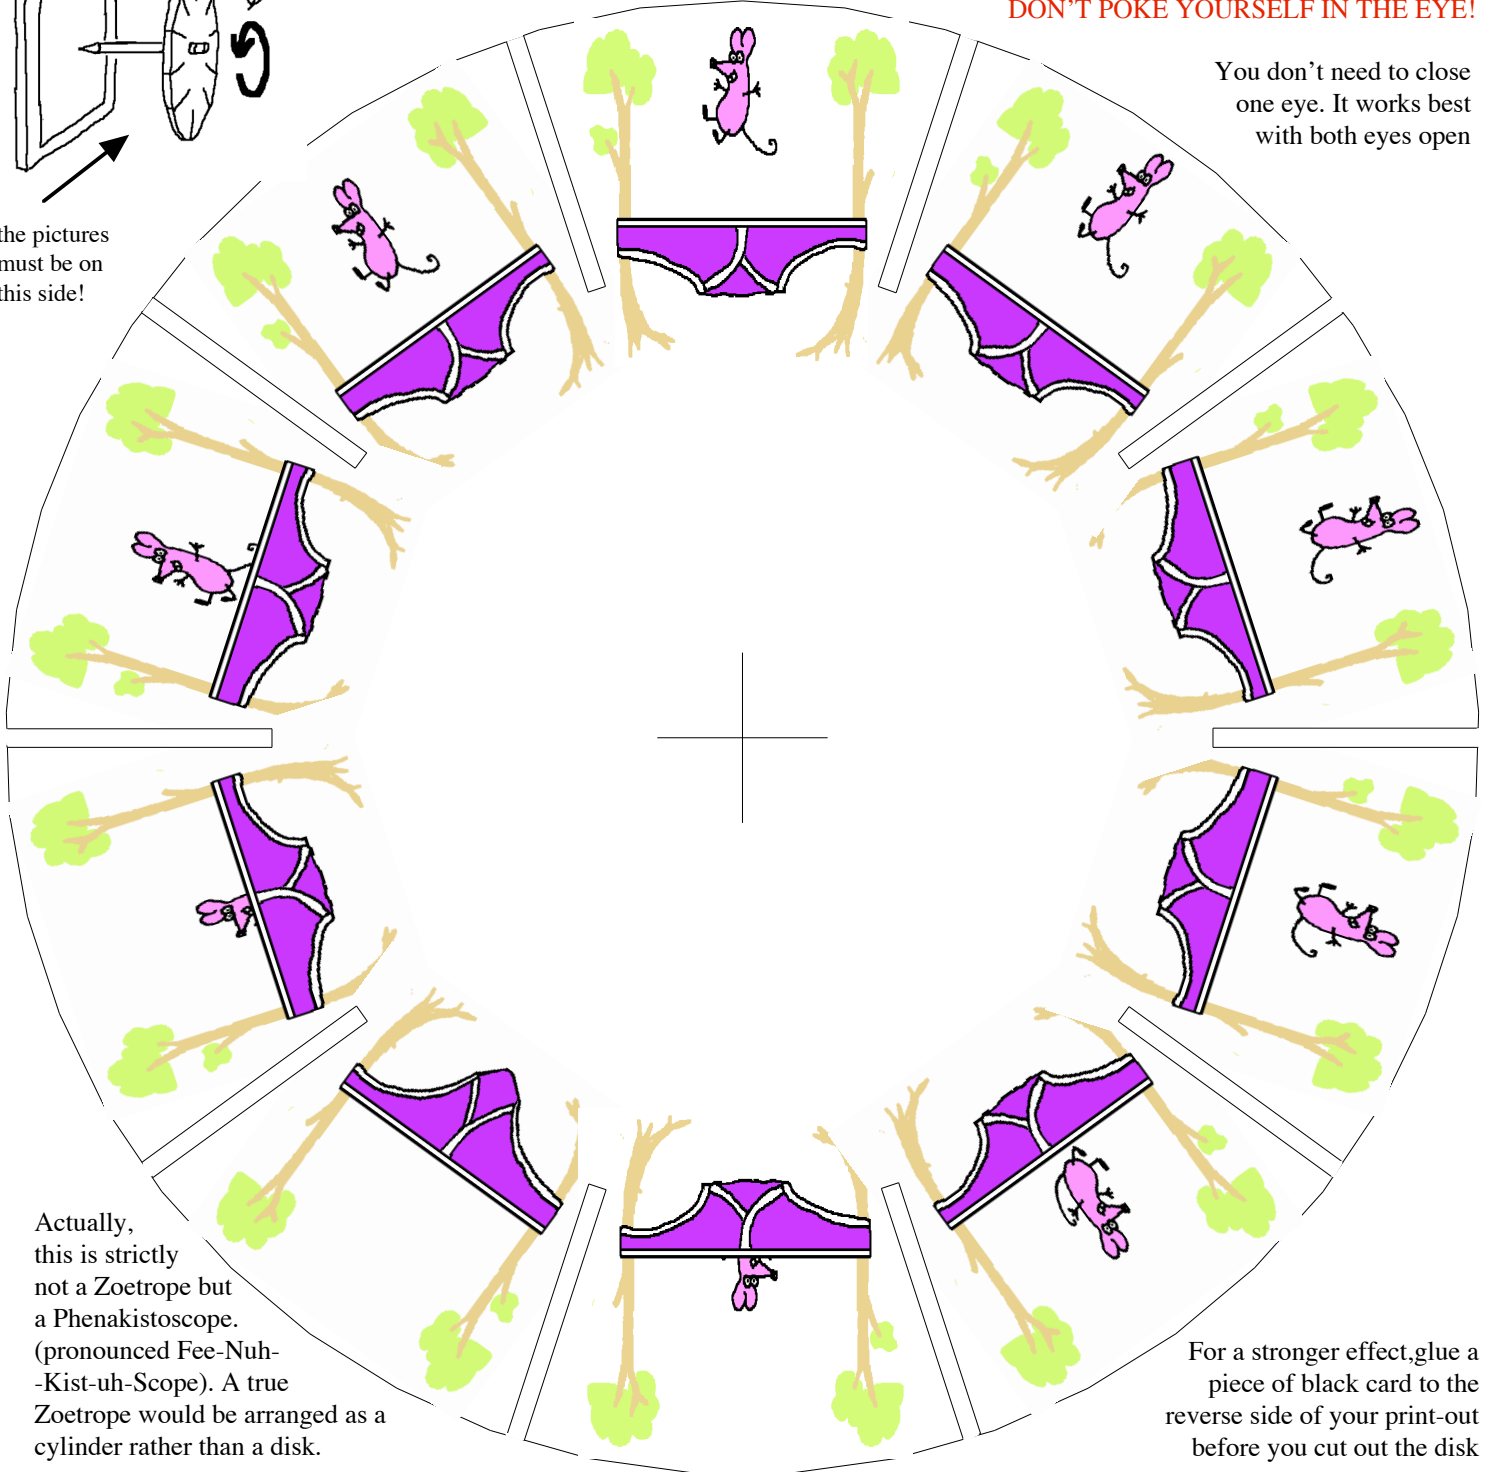

bright light works best!

the pictures must be on this side!

DON'T POKE YOURSELF IN THE EYE!

You don't need to close one eye. It works best with both eyes open

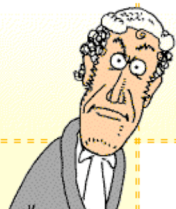

Actually, this is strictly not a Zoetrope but a Phenakistoscope. (pronounced Fee-Nuh-Kist-uh-Scope). A true Zoetrope would be arranged as a cylinder rather than a disk.

For a stronger effect, glue a piece of black card to the reverse side of your print-out before you cut out the disk
